Can Make a Superhero Out of You

Put away the cape—you do not need X-ray vision to see inside your equipment—but you do need **Esco Products**.

Esco offers affordable and easy-to-install products that allow users to take the guesswork out of fluid lubrication management.

“The Esco Oil Sight Glass can be the first component to an oil management program or it can complement an existing program,” says David Haught, President of Esco Products. “It provides analysis in a simple yet effective manner—it lets the technician see the oil.”

Here’s a “look inside” the solutions Esco provides:

Esco Oil Sight Glass is a clear acrylic cylinder installed in the drain port of the oil reservoir to provide continuous fluid monitoring of the clarity, color, sediment

**In today’s maintenance and lubrication management industry, being faster than a locomotive isn’t as critical as being able to continuously measure oil quality.**

and water contamination. The drain valve allows easy discharge of accumulated water.

To facilitate various equipment configurations, the Esco Oil Sight Glass product line includes several models:

- The vertical model supports equipment with access to the drain port.
- If there is not adequate clearance,

the horizontal model has the ports machined eccentrically to allow the fluids to separate and accumulated water to drain.

- In environments with exposure to temperatures exceeding 160°F, the High Temperature Esco Oil Sight Glass provides support up to 450°F.
- They also produce high volume vertical models of 16 ounce and 32 ounce to facilitate situations where water contamination is severe or the operators want to observe larger volumes of oil.
- The Oil Sight Glass and Level Monitor allows users to observe the level of the reservoir oil while maintaining functionality and comes in heights up to 24 inches.

In today’s maintenance and lubrication management industry, being faster than a locomotive isn’t as critical as being able to continuously measure oil quality.

Call Esco and let them make a superhero out of you!

## Instantaneous Oil Inspection.

Now you can easily check the quality, color and level of oil with ESCO’s **Oil Sight Glass & Level Monitor.**

- Quickly discharge any water before it damages oil lubricity
- Easily monitor oil for proper level
